

FMDesktop Components

Autodesk FMDesktop includes four major components to enable a complete facility management solution for your organization's specific needs.

Autodesk® Facility Link

Connect objects in your facility drawings to records in the Autodesk FMDesktop database through an intuitive interface.

Autodesk® Facility Manager

Manage all facility drawings and data in one database environment. Query, pan, zoom, print, and share facility drawings and data.

Autodesk® Facility Web

Use the web to access and share all facility data and drawings through the Internet or your organization's intranet.

Autodesk® Facility Request

Help your facility occupants enter service requests ranging from corrective maintenance to moves.

Learn More or Purchase

To learn more or to purchase Autodesk FMDesktop, contact your Autodesk Premier Solutions Provider or Autodesk Authorized Reseller. To locate the reseller nearest you, visit www.autodesk.com/reseller.

To locate your nearest Autodesk FMDesktop partner, visit www.autodesk.com/fmdesktoppartner.

Make it look easy.

Move with Purpose

No matter the portfolio size, facility managers and planners have a lot of information to assimilate and process. Take charge of your drawings, markups, spreadsheets, reports, requests, and more. *Always* be ready.

Using our previous computer-aided facilities management system, there was no way to print drawings with all the cost centers highlighted. We'd have to highlight the drawings with markers—cube by cube, office by office. It used to take many weeks each quarter to finish it all. Now, using Autodesk FMDesktop, we can do the same thing with a couple of mouse-clicks.

Boston Scientific

Use Existing Resources

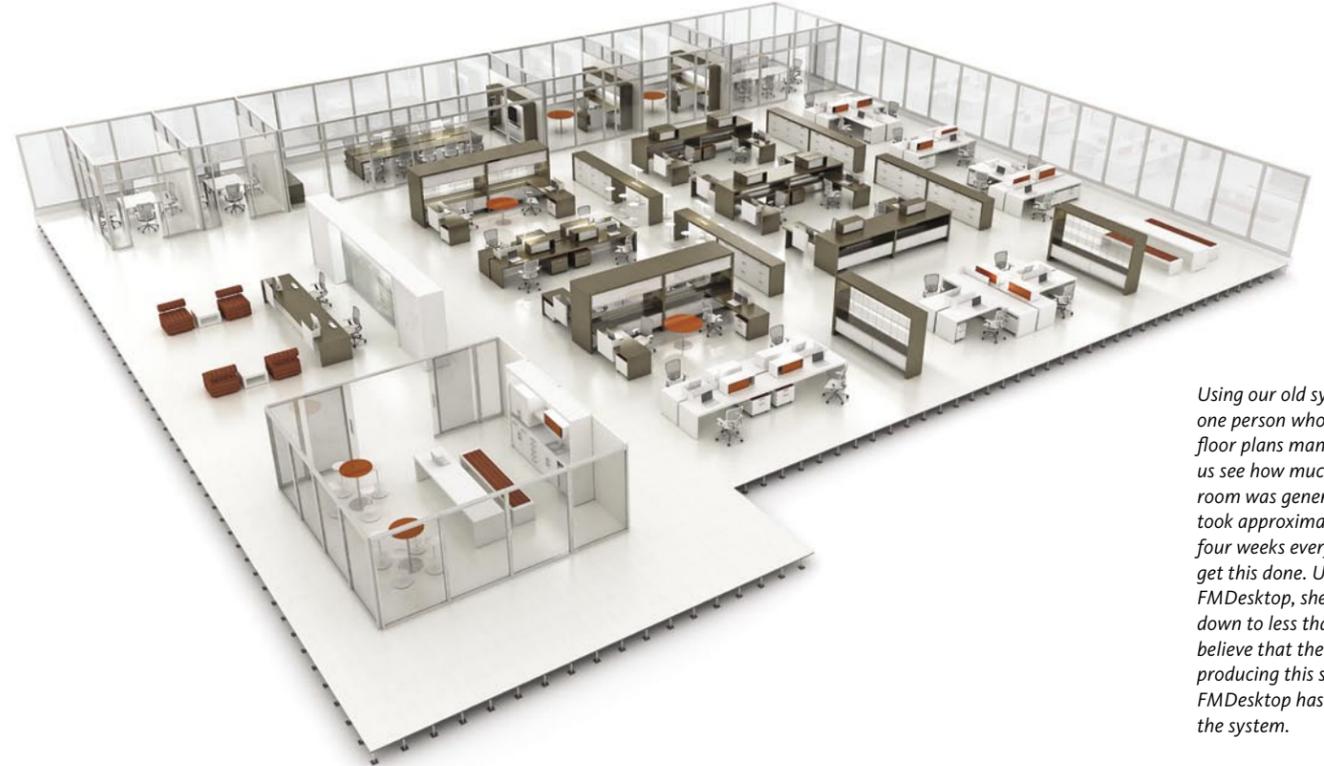

With Autodesk® FMDesktop software, you and your employees can access, integrate, and distribute important facility information through an intuitive interface purpose-built for facilities professionals. Industry-standard platforms such as AutoCAD®, DWF™, Microsoft® Excel®, as well as Autodesk® Architectural Desktop 2007 and Autodesk® Revit® Building 9.1, are compatible with Autodesk FMDesktop, effectively uniting professionals of all backgrounds and skill sets. Even in the most complex facilities, simpler is always better.

Real-World Solutions

Developed by and for facility managers, Autodesk FMDesktop offers intuitive and easy-to-use features. Organizational requirements are addressed through full integration of vital design, asset, and facility management information. Search for specific space or assets on any displayed floor plan, and then select and view vital facility data with just a few clicks. Generate actionable reports, track your organization, even have employees submit and track service requests. At every stage of your operation, remain realistic.

Manage Deliberately

Track every person, place, and thing. Plan precisely for moves, emergencies, recoveries, and repairs. Know what facility problems need to be addressed and where. Learn when operations can start, who they will affect and how, all from your existing drawings and floor plans. It's your information: waste not, want not.

Using our old system, we had one person who color coded floor plans manually to help us see how much revenue each room was generating. She took approximately three to four weeks every quarter to get this done. Using Autodesk FMDesktop, she's taken that down to less than one week. We believe that the time saved in producing this single report from FMDesktop has already paid for the system.

Import, Export, Integrate

Using DWF technology, an open and secure file format for distributing rich design data, turns project drawings into facility management tools. Import data directly from drawings created in currently supported versions of AutoCAD software. Select and view the status of particular office space and equipment using readable drawings created in Autodesk Architectural Desktop 2007 or Autodesk Revit Building 9.1.

Query Drawings and Create Reports

Autodesk FMDesktop infuses project drawings with vital information, and then provides them whenever and wherever they are needed. Click to retrieve important data from drawings. Find out exactly what you need to know, and then tell others by creating reports, spreadsheets, and more.

Maintain Manageability

A complete computerized maintenance management system (CMMS), Autodesk FMDesktop enables maintenance professionals to store and locate vital information about building operations, inform management in a timely fashion, decrease downtime, and prevent potentially costly errors. Request and schedule emergency repairs and preventive maintenance with minimal inconvenience. Access up-to-date asset information including warranties, service contracts, spare parts, and more.

Build Teams

People are watching. Maybe they can help. Autodesk FMDesktop distributes facility data to anyone who needs to see it. Branch staff can access information from the home office. Employees can submit and receive service requests remotely. HR managers can locate vacant space for new hires. As soon as possible becomes right now.
